Football

### Abstract

The Objectof the study in your hands aims to identify the main causes of the spread of sports corruption in football as well as the mechanisms of combating sports corruption in football, and to present the reality of football in Algeria from the point of view of specialists and to identify the importance of the use of educational means in the field of physical and sports education and for that we followed the descriptive survey method, where the sample of the study reached 49 university professors from the Institute of Physical Education and Sports In Dali Brahim University of Jar3 er and selected in a deliberate way, and The researcher methods statistical correlation coefficient for Pearson, spss and Excel. The most important results of the study were that the administration, players and their coaches are among the main causes of the spread of sports corruption, as some of them can settle the results of the game or seize the rights of some, and that the spread of the phenomenon of corruption in football has many hidden factors.

## **1. Introduction**

Corruption is one of the oldest phenomena that has emerged, and its existence has been associated with the existence of political systems. There is no doubt that this epidemic, in all its forms, and its various forms have spread to all countries of the world, as it has become a serious global phenomenon that threatens the economies of states and works to weaken and collapse, as well as frustrate their financial systems and political structure, which negatively affects moral values, justice and equality and leads to the destabilization of public confidence and threats to social security, political stability, economic prosperity and other serious negative effects. Referring to studies and statistics on the phenomenon of corruption in different countries of the world, we find that most of the countries and societies that suffer from this phenomenon are Arab Muslims, although the Islamic religion is rich in values and principles that seek to combat this phenomenon, and we do not rule out the existence of many laws and regulations that in turn work to combat and reduce corruption .(Quay, & Peters, 2009).Corruption is one of the most prominent problems that hit many sectors and areas of life in most societies and countries, and sports like the rest of the fields have known this scourge, which has affected the main nerve of football, (Dyson & Rubin, 2003; Lund, & Tannehill, 2005) the latter hardly two differ on the importance of the role it plays in the development and development of sports because of its international fame, (Johnson & Johnson, 1999). especially with the increase disprofessionalism in the sports sector and its expansion. Sports corruption has come under the microscope recently and has become the top in the list of sports institutions (Abdel Fattah, 1997).On the other hand, the mechanisms of combating it, especially its regulatory systems, and this in order to reduce and pounce on the phenomenon of sports corruption within sports institutions, we have recently heard this word of corruption a lot because corruption is putting its hand in all fields and in all directions even football has not been spared from corruption.

Sports corruption may be in various forms, such as mismanagement, violence, racism, intolerance, aggressive planning, bribery, nepotism, falsification of election and club results. The adoption and corruption of matches, manipulation of their results, the abuse of athletes' rights, the loss of sports ethics, all due to the involvement of officials and sports institutions who have shirked and neglected their duty because they did not know the basics

of sports work. This great interest in reducing the phenomenon of sports corruption in football, led specialists and scientists to follow new concepts that are concerned with the human element because it is the main link to the success of any institution, especially the involvement of doctors and researchers in the field in the process of identifying and controlling the causes of this phenomenon and working to find mechanisms and solutions field and effective to reduce it and punish the perpetrators.

From this point of view, this study will address the corruption of sports in the field of football, which many sports institutions and bodies consider to be the biggest source of corruption because of its global popularity and revenues, as well as the mechanisms to combat it from the point of view of specialists, represented by professors and university doctors specialized in the field of sports in general and in football in particular.

The research was divided into two main sections, theoretical and practical, the theoretical aspect of the first

**Chapter 1** :in which the focus was on sports corruption.

**Chapter 2**: The topic of the university professor was addressed.

**Chapter 3**: It included the theme of football.

This application aspect comes after and is divided into two chapters:

**Chapter 1**: The methodological methods of research in which we addressed the method used in the study and the field of space and time as well as the scientific conditions of the tool and the research community, then the sample research and how to choose it, and finally the tools of study.

**Chapter 2**: We dealt with the presentation of the data and analysis and then the results of the study and in the end the conclusion and the study supplements and references were drawn up .

-What is the nature of the actors in the spread of corruption in professional clubs"?

## 2- Method and Materials

### 2.1- Sample and methods of selection:

The research sample formed of 49 professors chosen randomly from among the professors of the Institute of Science and Techniques of Physical and Sports Activities at Dali Brahim Unive of Algiers 3 -

**Independent variable**: is the factor that the researcher wants to

measure the extent of its impact on the phenomenon studied and generally what is known as the variable or experimental factor.

The independent variable in our research is "anti-corruption mechanisms."

**-Determine the variables:**

It is a variable whose value depends on the effect of other variable values, since the more we make changes to the independent values, the results will appear on the values of the dependent variable.

The variable in our research is "sports corruption in football."

**Research tools and their scientific foundations:** In order to test the proposed hypotheses of our research and to determine the extent of its achievement and from its objectives was prepared, questionnaire and knows, is developed and this questionnaire is directed to the professors of physical education and sports at the university, which contains three axes where each axis is devoted to the study of the hypothesis of our research hypotheses. Design and Procedure Describe the analyses applied to the data. It is helpful if you arrange this section to be coherent with the hypotheses.

-The researcher resorted to the SPSS program to calculate the following equations: - SMA - standard deviation - Student test. (t) - Coefficient of variation

**2.2Participants:**

This sample was made by 49 university professors from the Institute of Physical and Sports Education at Dali Brahim University of Algiers 3

**2.3 Research tools and their scientific foundations :**

-Independent variable: is the factor that the researcher wants to measure the extent of its impact on the phenomenon studied and generally what is known as the variable or experimental factor.

The independent variable in our research is "anti-corruption mechanisms."

-Child variable: It is a variable whose value depends on the effect of other variable values, since the more we make changes to the independent values, the results will appear on the values of the dependent variable.

The variable in our research is "sports corruption in football."

-Search tools : In order to test the proposed hypotheses of our research and to determine the extent of its achievement and from its objectives was prepared, questionnaire and knows, is developed and this questionnaire is directed to the professors of physical education and sports at the university,

which contains three axes where each axis is devoted to the study of the hypothesis of our research hypotheses.

## 2. Results:

**Table 01:** Explains the results of the first axis phrases "Interference with the powers of sports bodies may affect the spread of the phenomenon of sports corruption".

**Table 02:** Shows the results of the sports administration's contribution to curbing the prevalence of sports corruption in football.

Analysis of results: Through the results of Table 02, we find that one of the main causes of sports corruption in football is the contribution of sports management to curbing the prevalence of sports corruption in football,

which is indicated by the mathematical average of the 16 words about poor control and performance evaluation systems. The two terms are equal to 13.18 with an estimated value of 2.53, which means that the majority of the sample agreed to the content of the two terms.

**Table 03:** The results of the third axis phrases show that "player and coach's immoral manipulation is a manifestation of sports corruption in football".

**Table 04:** Shows the results of how arbitration contributes to the spread of corruption in football.

Analysis of results:

The results of table 04 show that the total arithmetic average of the axis falls within the approval area with an estimated value of 2.49, which means that the members of the sample agree on the contents of the fourth axis phrases concerning the contribution of arbitration to the spread of corruption in the sphere .

#### 4- Discussion

From the results of Table No. (08), it becomes clear to us that among the most prominent causes of administrative corruption from the focus of administrative factors is the interference of mediation and nepotism in the appointment, as 4.71% of the sample members agreed with this, followed by “weakness of the system of control and performance evaluation” As the second most prominent reason, which is shown by the arithmetic mean of expression No. (07), while the arithmetic mean of each of the two expressions No. (06 and 09) was equal to an estimated value of 53.2, which means that the majority of the sample members agreed on the content of the two statements.

Failure to put the right person in the right place, phrase No. (06) and the lack of facilities in the facilities. Following the statements, in order in terms of the arithmetic mean, is statement No. 03, where 30 individuals from the sample agreed on its content, while 04 individuals somewhat agreed, and the percentage of those who did not agree with its content did not exceed 2.10%, with a number of 5 individuals, and as the fifth arithmetic average in Failure to put the right person in the right place, phrase No. (06) and the lack of facilities in the facilities. Following the statements, in order in terms of the arithmetic mean, is statement No. 03, where 30 individuals from the sample agreed on its content, while 04 individuals somewhat agreed, and the percentage of those who did not agree with its content did not exceed 2.10%, with a number of 5 individuals, and as the fifth arithmetic average in the axis came the two statements No. 01 and 09) with a value of 49.2, while phrase No. (06) ranked sixth with a value of 37.2, or the lowest value of the arithmetic average in the second axis was the share of phrase No. (02) and its content “increasing the number of workers for work needs” is the least of the reasons Severity in the spread of corruption in the axis of administrative reasons.

the axis came the two statements No. 01 and 09) with a value of 49.2, while phrase No. (06) ranked sixth with a value of 37.2, or the lowest value of the arithmetic average in the second axis was the share of phrase No. (02) and its content “increasing the number of workers for work needs” is the least of the reasons Severity in the spread of corruption in the axis of administrative reasons.

**5 - Conclusion:**In the light of the hypotheses and objectives of the research and the limits of what the results of the study and the circumstances in which it was conducted, and the sample chosen to represent the original society and based on the findings of the effort to find a solution to the

problem of research in our reliance on The evidence and information we get, we have concluded that several active elements overlap in the spread of the phenomenon of sports corruption in the fields of football, on the other hand we concluded that football players and their coaches are among the main causes of the spread of sports corruption, as well as arbitration has an active role in the spread of The phenomenon of football corruption through our study, which was not pure coincidence or random, but was the result of conviction and because of what has become of football and what we have become to see of the big issues of corruption shake its time, where our overall goal was to identify the factors of widespread corruption in football, and after going through the basic stages that every researcher passed through we were able even in a simplified way that the spread of the phenomenon of corruption in football has many factors, as the ability of the management of sports, as well as the ability of the sports administration To reduce sports corruption by applying laws, enforcing regulatory regulations, and holding accountable and punishing all those involved.
